

NGUYEN PHUONG NAM

0878141528 | nnam.hp2005@gmail.com | github.com/moimoi05 | Hoai Duc, Hanoi, Vietnam

EDUCATION

University of Engineering and Technology – Vietnam National University, Hanoi

Major: Artificial Intelligence

September 2023 – Expected December 2026

GPA: 3.28 | IELTS: 6.0

Honors: Top 10% Finalist, Naver Hackathon; Consolation Prize, UET Makathon; Outstanding Student Certificate, 2026

Portfolio: nnam05.id.vn

EXPERIENCE

Viettel High Tech

December 2025 – July 2026

AI Intern, UAV Perception and Navigation Department

- Developed computer vision solutions for UAV target detection using thermal/infrared camera data.
- Integrated and processed UAV thermal camera imagery for target detection in simulated aerial environments.
- Developed a camera simulation plug-in for X-Plane 11 and integrated objects and maps to support UAV perception and navigation scenarios.

Central Military Hospital 108

December 2025 – September 2026

Junior Software Developer, Equipment Department

- Developed an end-to-end medical supply management system using Golang for use across hospital departments.
- Designed the database schema, RESTful APIs, and backend business logic for medical supply management.
- Implemented WebSocket-based real-time communication for live data updates between the backend and web application.
- Integrated a retrieval-augmented generation (RAG) chatbot powered by the Gemini API to answer natural-language questions over application data and internal knowledge.
- Deployed and integrated the system into the hospital's internal web environment.

RTC Technology Vietnam

September 2026 – Present

Technical Intern, R&D/Vision Division

- Supported image processing and deep learning for product defect inspection, QR, Data Matrix, and barcode reading, and OCR.
- Supported vision-guided product positioning for robotic pick-and-place applications.
- Configured vision systems and selected cameras, lenses, and lighting for each application.

AVITECH Research Group, VNU-UET

Present

Undergraduate Thesis Researcher — Alzheimer's Disease Prognosis

Research profile: avitechresearch.vn/nguyen-phuong-nam/

- Conduct undergraduate thesis research on Alzheimer's disease prognosis using deep learning.
- Investigate longitudinal and multimodal data to model and predict disease progression over time.

TECHNICAL SKILLS

Programming: Python, Golang

Machine & Deep Learning: PyTorch, Scikit-learn, Hugging Face, CNN, RNN, LSTM, Transformer, BERT, GPT

Computer Vision: YOLOv8, FaceNet, MTCNN, InceptionResnetV1

Data / Scientific Computing: NumPy, Matplotlib, SQL, NonSQL

Tools: Docker, Colab, CI/CD
